The start codon of ATG is indicated by double underline.

Green color sequences are for YPYDVPDYA tag.

Red color sequences are from human XBP1 gene (NOTE; ATGs are changed into AAGs).

Underlined sequences are the intron of XBP1.

Bold sequences are from luciferase gene of pGL3 (promega).

Blue color sequences are for DYKDDDDK tag.

Orange color sequences are SV40 intron and polyA signal.
